

## **Canopy test to make carriers safer:**

The Land Transport Authority conducted a roll exercise to test a carrier canopy. The test was conducted at the Ratu Sukuna Memorial School terrace; this was to show whether the canopy was safe for people in the event of a crash. The Land Transport Authority Mr. Abraham Simpson has mentioned that the test was encouraging and further test would be conducted to ensure the safer canopy design.

The canopy should be strong enough to stand through all forces when a vehicle tumbles. This means when a carrier crashes the canopy frame often collapsed, and this would result in injury or even death. Mr. Simpson said, "Human life is so precious."
